The Ziggurat of Ur. The ziggurat at Ur and the temple on its top were built around 2100 B.C. by the king Ur-Nammu of the Third Dynasty of Ur for the moon goddess Nanna, the divine patron of the city state. The structure would have been the highest point in the city and would have been visible for miles around.

A Middle Kingdom farmhouse scene. Though there are scores of representations of rural activities in the form of low reliefs or paintings on the walls of Old and New Kingdom tombs, the numerous wooden models of houses, workshops and boats discovered in the tombs of Middle Kingdom estate owners have a special immediacy and charm, and have supplied much informa-

tion on daily life. Here we see a typical flat-roofed house, partly supported on columns. In the yard, with its granaries, people are preparing food and feeding ducks. To the right, a man is examining beehives. In the fields men are plowing, sowing, milking and opening irrigation canals.
